PROFILE

Game developer and designer passionate about building immersive, fast paced gaming experiences across web, desktop, and mobile platforms. Skilled in Unity 3D, HTML5 Canvas, Pygame, and gesture based AI controls, with expertise in level design, procedural generation, and gameplay systems. Creator of multiple indie titles blending gameplay mechanics, UI/UX, and performance optimization, with a proven ability to design and ship complete games from concept to release.

EXPERIENCE

Python Developer Intern

Sept 2025 to Apr 2026

Nilee Games & Future Technologies, Borivali, Mumbai

- Developed computer vision pipelines using OpenCV, MediaPipe, and YOLO for interactive motion controlled gaming systems.
- Trained and evaluated custom object detection models for tracking balls, gestures, and player movements in real time.
- Built communication pipelines between Python vision systems and Unity applications to synchronize player actions with game events.
- Worked with depth cameras and real time image processing workflows to support multiplayer and motion tracking experiences.
- Recognised by management as a self starter, committed team player, and motivated contributor during internship completion.

GAME DEVELOPMENT PROJECTS

AI-Powered Endless Runner (Temple Run Style)

2025

Unity 3D, C#, MediaPipe, Computer Vision

- Built a complete 3D endless runner with AI powered gesture recognition using MediaPipe.
- Implemented lane switching, jumping, and obstacle avoidance driven by real body movement controls.
- Created procedural 3D cityscape generation with dynamic building algorithms.
- Optimized performance with dynamic object management and real time pose detection.

ChaserPRO – Fast-Paced Survival Game

2025

JavaScript, HTML5 Canvas, CSS

- Built a browser based survival game featuring time manipulation, rage mode, and teleport abilities.
- Designed cooldown UI with circular meters, score tracking, and minimap indicators.
- Optimized for desktop (WASD/Arrow keys) and mobile (swipe and touch) controls.

Ultimate Platformer Adventure – Ninja Awaken

2025

HTML5 Canvas, Web Audio API, JavaScript

- Developed 8 dynamic levels including Emerald Hills, Crystal Caverns, and Ice Palace.
- Implemented power ups (Speed Boost, Coin Magnet, Invincibility) with particle effects.
- Built custom mobile touch controls and an adaptive difficulty system.

Naruto vs Sasuke – 2D Fighter

2022

Python, Pygame

- Designed a combat system with spritesheets, hitboxes, and dynamic health bars.
- Built the game loop, event handling, and sprite animations from scratch.

TECHNICAL SKILLS

Game Development: Unity 3D, C#, HTML5 Canvas, Pygame, Sprite Animation

Game Design: Level Design, Game Balancing, UI/UX, Player Progression Systems

AI & Computer Vision: OpenCV, MediaPipe, YOLO, Pose Detection, Gesture Recognition

Game Systems: Physics, Collision Detection, Procedural Generation, Particle Effects

Scripting: JavaScript, Python, C#

Tools: Git, VS Code, Unity Editor, Web Audio API, Performance Optimization

EDUCATION

B.E. in Computer Engineering, Vishwaniketan College

2021 to 2025 | CGPA 7.31

12th Science, HOCL Pillai

2019 to 2021 | 80%

ACHIEVEMENTS

Winner & Runner-up, Python Project Competitions (2022 to 2024). | National Participant, Viksit Bharat Young Leaders Dialogue 2025. | Certified: Advanced Python, Arduino & Robotics. | Graphic Manager, Google Developer Students Club (GDSC). | Lead Designer, Department Magazine. | Published multiple indie game titles with cross platform support.

INTERESTS

Game design, indie game development, gaming culture, and cross-platform game publishing.
